## SUBJECT INDEX

Acarbose is a competitive inhibitor of mammalian lysosomal acid α-D-glucosidases, 71

*N*-Acetylmuramic acid, synthesis of, by selective functionalization of HO-3 of 2-acetamido-2-deoxy-D-glucose, 144

*Actinobacillus pleuropneumoniae* serotype 4 (ATCC 33 378), structure of O-chain of antigenic lipopolysaccharide of, 295

Adduct 3NaI·2 sucrose·3 $H_2O$ the crystal structure of the, 91

Aldonolactones for the synthesis of 2-*O*-methyl-L-rhamnose and 2-*O*-methyl-D-mannose, 130

Alginates from three species of brown seaweeds, composition and sequence of uronate residues in, 167

Alkenes and alkadienes, *C*-(α-D-glucopyranosyl)-, synthesis, Diels–Alder reaction, 223

Ant-egg glycoprotein and its interaction with jacalin, purification of, 305

Arylation of pyranoid glycals with bromomagnesium phenolates, synthesis of 2,3-unsaturated *C*-α-glycopyranosylarenes by, 241

Azidation of L-sorbose, selective, 163

Bark of the Kapok tree (*Ceiba pentandra* var. indica), structural features of alkali-soluble acidic xylans isolated from the, 333

Bark of the Kapok tree (*Ceiba pentandra* var. indica), structure of water-soluble acidic polysaccharides isolated from the, 321

Borate complexes of D-allose, D-talose, and D-psicose in aqueous solution, an $^{11}B$- and $^{13}C$-n.m.r. study of the structures of the, 63

Capsular polysaccharide from *Streptococcus sanguis* 34, structure of, 279

Cation-dependent gelation of the acidic extracellular polysaccharides of *rhizobium leguminosarum:* a non-specific mechanism for the attachment of bacteria to plant roots, 315

O-Chain of antigenic lipopolysaccharide of *Actinobacillus pleuropneumoniae* serotype 4 (ATCC 33 378), structure of, 295

Chiral building block derived from methyl α-D-glucopyranoside, synthesis of 4-deoxy-β-rhodomycinone via incorporation of a, 253

Composition and sequence of uronate residues in alginates from three species of brown seaweeds, 167

Crystal structure of NaBr·sucrose·2 $H_2O$ re-determination of the, 105

Crystal structure of the adduct 3NaI·2 sucrose·3 $H_2O$, 91

1-*O*-Deacylation of per-*O*-acylaldoses, facile, 150

2′-Deoxy-β-disaccharides, novel approaches to the synthesis of, 29

Deoxyhexopyranosides, an n.m.r. study of some, using a lanthanide-shift-reagent, 351

1-Deoxynojirimycin, synthesis of, 163

4-Deoxy-β-rhodomycinone, synthesis of, via incorporation of a chiral building block derived from methyl α-D-glucopyranoside, 253

6-Deoxy-6-sulfo-α-D-glucopyranosyl phosphate, synthesis of, 21

Derivatives of methyl 4-deoxy-4-hydroxyamino-α-D-gluco- and galacto-pyranosides, 138

Determination of the structures of pentose-containing carbohydrates by the reductive-cleavage method, 343

β-Disaccharides, novel approaches to the synthesis of 2′-deoxy-, 29

Facile 1-*O*-deacylation of per-*O*-acylaldoses, 150

Furans, 1,3-dipolar cycloaddition reactions of the products of photo-oxygenation of polyhydroxyalkyl- and glycosyl-, 209

Gelation of the acidic extracellular polysaccharides of *Rhizobium leguminosarum*, cation-dependent, 315

G.l.c. of peracetylated aldononitrile and ketoxime derivatives for quantitation of free sugars in plant tissue, 175

DL-Glucopyranose, synthesis of derivatives of pseudo-4-amino-4-deoxy- and pseudo-4-amino-4,7-dideoxy-α-, 154

β-D-Glucopyranose, 6-*O*-α-D-xylopyranosyl, the disaccharide unit of xyloglucan in plant cell-walls preparation and characterization of antibodies against, 79

*C*-(α-D-Glucopyranosyl)-alkenes and -alkadienes, synthesis, Diels–Alder reaction, 223

D-Glucopyranosyl phosphate, synthesis of 6-deoxy-6-sulfo-α, 21

α-D-Glucosidases, acarbose is a competitive inhibitor of mammalian lysosomal acid, 71

*C*-D-Glucosylarenes in high yield, stereoselective and mild method for synthesis of, 125
Glycopeptide components of the α-L-rhamnosidase of *Penicillium decumbens*, characterisation of two, 53
Glycoprotein, purification of ant-egg, and its interaction with jacalin, 305
*C*-α-Glycopyranosylarenes, synthesis of 2,3-unsaturated, by arylation of pyranoid glycals with bromomagnesium phenolates, 243
Glycosylation with a D-xylose 1,2-*O*-(1-cyanoethylidene) derivative, observations on the 1,2-*trans*-stereoselectivity of, 13

DL-Hexopyranoses, pseudo-, proton and $^{13}C$-n.m.r. spectra of six 2-acetamido-2-deoxy derivatives, 357
Hexopyranosis-3-uloses and their α-D-*ribo* isomers, and formation of glycosid-3-ulose hydrates for the β-D-*xylo* isomers, preparation of methyl 4,6-*O*-benzylidene-2-chloro- and -2-bromo-α- and β-D-*xylo*, 231
High-resolution, two-dimensional $^{1}H$-n.m.r. spectroscopy of lactose-containing oligosaccharides, 191
$^{1}H$-N.m.r. spectroscopy, high-resolution, two-dimensional, of lactose-containing oligosaccharides, 191
Human milk oligosaccharides, isolation of monosialylated, and structural analysis of three new compounds, 261
4-Hydroxyamino-α-D-gluco- and -galacto-pyranosides, derivatives of methyl 4-deoxy, 138

α-D-Idopyranoside methyl 6-deoxy structure of, 1
Isolation of monosialylated oligosaccharides from human milk and structural analysis of three new compounds, 261
β-Isoprimeverose, the disaccharide unit of xyloglucan in plant cell walls, preparation and characterization of antibodies against, 79

Lactose-containing oligosaccharides, structural analysis of, 191
Lanthanide shift reagent, an n.m.r. study of some deoxyhexopyranosides using a, 351
Lanthanide-shift-reagent study of some deoxyhexopyranosides, 351
Levan, production by levansucrase of, 117
Levansucrase, production of levan by, 117
Lipopolysaccharide antigenic O-chain of *Actinobacillus pleuropneumoniae* serotype 4 (ATCC 33 378), structure of, 295

Mammalian lysosomal acid α-D-glucosidases, acarbose is a competitive inhibitor of, 71
Methyl 4,6-*O*-benzylidene-2-chloro- and -2-bromo-α- and β-D-*xylo*-hexopyranosid-3-uloses and their α-D-*ribo* isomers, and formation of glycosid-3-ulose hydrates for the β-D-*xylo* isomers, preparation of, 231
Methyl 4-deoxy-4-hydroxyamino-α-D-gluco- and -galacto-pyranosides derivatives of, 138

N.m.r. study of the structures of the borate complexes of D-allose, D-talose, and D-psicose in aqueous solution, an $^{11}B$- and $^{13}C$-, 63

Oligosaccharides from human milk, isolation of monosialylated, and structural analysis of three new compounds, 261
Organic solvents, effect on levan production by levansucrase of, 117

Pentose-containing carbohydrates, determination of the structures of, by the reductive-cleavage method, 343
Per-*O*-acylaldoses, facile 1-*O*-deacylation of, 150
Photo-oxygenation of polyhydroxyalkyl- and glycosyl-furans, 1,3-dipolar cycloaddition reactions of the products of, 209
Polyhydroxyalkyl- and glycosyl-furans, 1,3-dipolar cycloaddition reactions of the products of photo-oxygenation of, 209
Polysaccharide of *Streptococcus sanguis* 34, capsular, structure of, 279
Polysaccharides isolated from the bark of *Ceiba pentandra* var. indica, structure of water-soluble acidic, 321
Polysaccharides of *Rhizobium leguminosarum*, cation-dependent gelation of the acidic extracellular, 315
Preparation and characterization of antibodies against 6-*O*-α-D-xylopyranosyl-β-D-glucopyranose (β-isoprimeverose), the disaccharide unit of xyloglucan in plant cell-walls, 79
Preparation of methyl 4,6-*O*-benzylidene-2-chloro- and -2-bromo-α- and β-D-*xylo*-hexopyranosid-3-uloses and their α-D-*ribo* isomers, and formation of glycosid-3-ulose hydrates for the β-D-*xylo* isomers, 231
Proton and $^{13}C$-n.m.r. spectra of six pseudo-2-acetamido-2-deoxy-DL-hexopyranoses, 357
Pseudo-4-amino-4-deoxy- and pseudo 4-amino-4,7 dideoxy-α DL-glucopyranose, synthesis of derivatives of, 154
Purification of ant-egg glycoprotein and its interaction with jacalin, 305
Purification of the α-L-rhamnosidase of *Penicillium decumbens* and characterisation of two glycopeptide components, 53

Quantitation of free sugars in plant tissue by g.l.c. of their peracetylated aldononitrile and ketoxime derivatives, 175

Re-determination of the crystal structure of NaBr·sucrose·2 $H_2O$, 105
Reductive-cleavage method, determination of the structures of pentose-containing carbohydrates by the, 343
α-L-Rhamnosidase of *Penicillium decumbens*, purification of the, and characterisation of two glycopeptide components, 53

Selective functionalization of HO-3 of 2-acetamido-2-deoxy-D-glucose, synthesis of *N*-acetylmuramic acid by, 144
L-Sorbose, selective azidation of, 163
Stereoselective and mild method for synthesis of *C*-D-glucosylarenes in high yield, 125
Stereoselective arylation of pyranoid glycals, using bromomagnesium phenolates: an entry to 2,3-unsaturated *C*-α-glycopyranosylarenes, 243
*Streptococcus sanguis* 34, structure of capsular polysaccharide of, 279
Structural features of alkali-soluble acidic xylans isolated from the bark of *Ceiba pentandra* var. indica, 333
Structure of methyl 6-deoxy-α-D-idopyranoside, 1
Structure of NaBr·sucrose·2 $H_2O$, re-determination of the crystal, 105
Structure of the adduct 3 NaI·2 sucrose·3 $H_2O$, the crystal, 91
Structure of water-soluble acidic polysaccharides isolated from the bark of *Ceiba pentandra* var. indica, 321
Structures of the borate complexes of D-allose, D-talose, and D-psicose in aqueous solution: an $^{11}B$- and $^{13}C$- n.m.r. study, 63
Sugars in plant tissues, quantitation by g.l.c. of peracetylated aldononitrile and ketoxime derivatives, 175
Synthesis of 2′-deoxy-β-disaccharides, novel approaches to the, 29
Synthesis of 4-deoxy-β-rhodomycinone via incorporation of a chiral building block derived from methyl α-D-glucopyranoside, 253
Synthesis of 6-deoxy-6-sulfo-α-D-glucopyranosyl phosphate, 21
Synthesis of derivatives of pseudo-4-amino-4-deoxy- and pseudo 4-amino-4,7-dideoxy-α-DL-glucopyranose, 154
Synthesis of *C*-D-glucosylarenes in high yield, stereoselective and mild method for, 125
Synthesis of 2-*O*-methyl-L-rhamnose and 2-*O*-methyl-D-mannose use of aldonolactones for the, 130
Synthesis of *N*-acetylmuramic acid by selective functionalization of HO-3 of 2-acetamido-2-deoxy-D-glucose, 144
*trans*-Stereoselectivity of glycosylation with a D-xylose 1,2-*O*-(1-cyanoethylidene) derivative, observations on the 1,2-, 13

Uronate residues in alginates from three species of brown seaweeds, composition and sequence of, 167
Use of aldonolactones for the synthesis of 2-*O*-methyl-L-rhamnose and 2-*O*-methyl-D-mannose, 130

Xylose isolated from the bark of *Ceiba pentandra* var. indica, structural features of alkali-soluble acidic, 333
D-Xylose 1,2-*O*-(1, cyanoethylidene)derivative, observations on the 1,2-*trans*-stereoselectivity of glycosylation with a , 13
